

Carbon Footprinting Emissions Report

Quorn Foods take seriously the responsibility to ensure we are managing our own impacts on the environment, which is why in 2012 we began calculating the carbon footprints for our products in line with internationally-recognised standards so we can understand their impacts and set goals to reduce these. Using a science led approach to environmental research and continuous analysis of our entire supply chain we're committed to ambitious targets and look forward to tracking our continuous improvement.

Our products are assessed against:

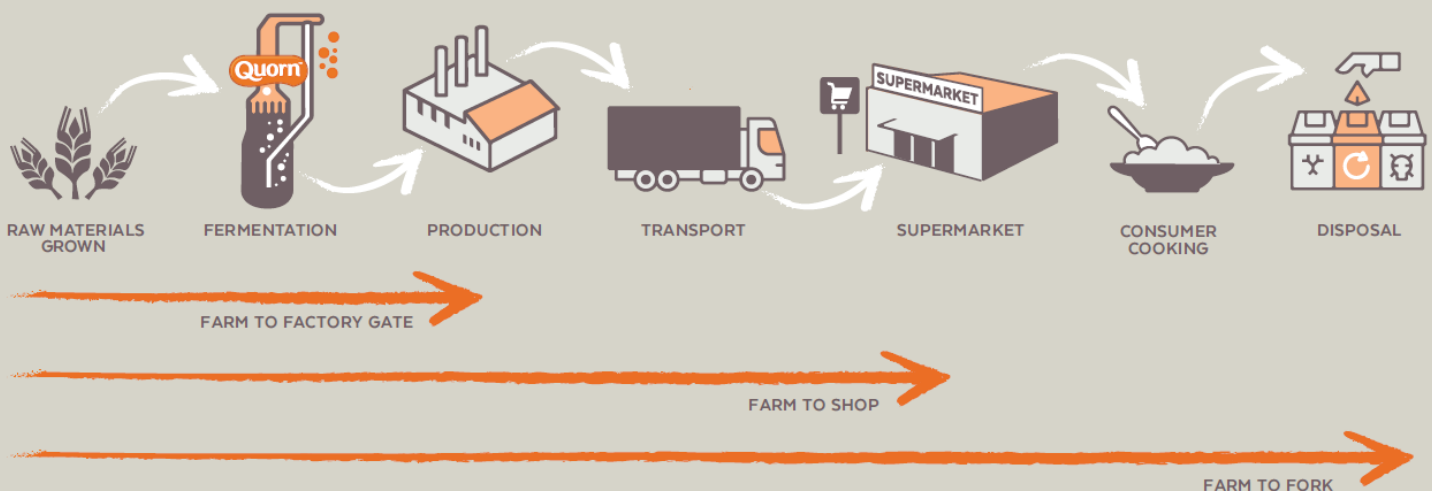

- PAS 2050:2011
- Product Carbon Footprint Protocol (parts 1 and 2) and
- The certification requirements of the Footprint Expert™ Guide

The values shown in the Footprinting Results represent the carbon footprints of our products using 'Farm to Factory Gate' and 'Farm to Fork boundaries, as well as 'Farm to Shop' for our Sweden products. All carbon footprints are third-party accredited and certified by the Carbon Trust.

'Farm to Factory Gate' accounts for all greenhouse gases emitted from farming the ingredients to extracting raw materials, manufacturing and packing the product, as well as all energy and transportation used throughout. 'Farm to Shop' adds the additional transport, storage and distribution to the supermarket. Whereas 'Farm to Fork' considers emissions right up until the end of the products life, including cooking of the Quorn product and finally disposal of the packaging.

All carbon footprints are measured in kgCO₂e (kg of carbon dioxide equivalent), which measures all greenhouse gases in one unit relative to the global warming potential of carbon dioxide.

Footprinting Results

The tables below reveal the 2019 carbon footprints for a range of our products.

Mycoprotein
